

freeVoice Vision 540 camera for professional video conferences and training sessions

The Vision 540 PTZ camera is your best choice for use in conference or training rooms. With the advanced swivel, tilt and zoom functions as well as full-HD resolution, you will always show participants your best side.

A sharp image at all times

The 10x optical zoom, swivel and tilt function as well as the lightning-fast autofocus provide a crystal clear image at all times in your conferences, be this of the whiteboard in the furthest corner of the conference room or the people sitting in the front row. This lets you experience video conferences as if you were in the same room.

Simple and silent

A conference camera has to be easy to use. Simply connect the Vision 540 PTZ to the mains and plug into your PC using a USB cable. That's all you need to do to get started and send perfect pictures to your favourite platform such as Zoom, Microsoft Teams, GoogleMeet etc. The very quiet rotating mechanism means you can hardly hear the camera swivel. It is operated intuitively by remote control so you can swivel smoothly between various people or things and zoom in and out.

Preparing things is child's play

Save up to 255 presets that can be called up later with a single click. 10 of these can even be programmed directly on the remote control. As a result, you don't have to fiddle around in conferences, training sessions or presentations looking for the right setting. This saves time and means you are ideally prepared for any situation.

Features

Features
